

FOR WEDDING PROFESSIONALS

Ceremony-day setup card

Keep this at the front of the room. Four things to check before anyone walks in, and one calm way the music runs once it starts. Work down it in order, and the part that cannot be redone will simply work.

1 *Readiness check* ONE PASS, BEFORE ANYONE WALKS IN

Every track is downloaded, the volume is set in the actual room at the actual speaker, and every notification is silenced. **Wedding Player runs this whole sweep as a single Ready to Go Live check** and flags anything that is not ready, so you are not guessing.

2 *Offline confirm* SIGNAL CANNOT LET YOU DOWN

The device is in airplane mode with every song stored on it, so nothing is streaming. No barn WiFi, no dropped Spotify link, and no dead signal at the worst possible moment.

3 *Cue and tap* IN CONTROL, WITHOUT SCRIPTING THE CLOCK

Each track sits behind one big button. Start it on your cue, and fade it out with one tap when the moment is done. No counting seconds, no timing tracks to the minute: the walk in, the signing, and the walk out each run on your word.

4 *Lock the screen* LIVE MODE

Once the music starts, **lock the screen for Live Mode**. A stray tap, a swipe, or a curious child cannot skip, pause, or close it.

Wedding Player turns this card into the app itself: offline playback so signal does not matter, a **Ready to Go Live check** that flags anything not ready, each track cued behind one button, a clean fade on a single tap, and a locked screen nothing can interrupt.
